

This listing of claims replaces all prior versions, and listings, of claims in this application.

**Listing of Claims:**

---

1. (Currently Amended) A trouble tracking system, comprising:

a server in communication with an electronic network;

a database in communication with the server, the database storing a plurality of trouble tickets;

a user computer in communication with the network and having access, via a graphical user interface (GUI), to the server, the graphical user interface including at least one screen, the screen being operable to enter a new trouble ticket along with (i) a person responsible for resolving the ticket and (ii) a severity level for the trouble ticket, and to store the trouble ticket in the database;

a paging system, in communication with the server, wherein when the severity level associated with the trouble ticket is above a predetermined threshold, the server automatically initiates a call to the person responsible via the paging system; and

means for communicating with and sharing trouble ticket data with an organization that operates under outside contract, the organization assigning its own tracking number to a given trouble ticket, the tracking number being stored in the database of the trouble tracking system,

wherein the database stores information relating to whether a resolution of a trouble ticket, proposed by outsourced personnel who work for the organization, has been ~~verified~~ approved by internal personnel for whom the outsourced personnel are working.

2. (Original) The trouble tracking system of claim 1, further comprising an email server, wherein the email server automatically sends an email message to the person responsible for resolving the ticket and the email message includes at least a trouble ticket number.

3. (Original) The trouble tracking system of claim 1, further comprising a report creation module, the report creation module being operable to generate reports based on the plurality of trouble tickets stored in the database.

 4. (Original) The trouble tracking system of claim 1, further comprising a duplicate search module, the duplicate search module identifying at least one of an actual or a potential duplicate trouble ticket stored in the database.

5. (Original) The trouble tracking system of claim 4, wherein the duplicate search module lists at least one pair of the actual or potential duplicate trouble tickets.

6. (Original) The trouble tracking system of claim 1, wherein the trouble tickets comprise at least one of a problem, an inquiry, a bill notification and a user acceptance data issue.

 7. Canceled

8. Canceled

9. (Original) The trouble tracking system of claim 1, wherein the database further stores status information.

10. (Original) The trouble tracking system of claim 1, wherein the database further stores information associating a trouble ticket to a geographical region.

11. (Original) The trouble tracking system of claim 1, wherein the network comprises the Internet.

12. (Currently Amended) A system for managing issue resolution, comprising:  
a plurality of computers interconnected in a network, one of the computers including a trouble ticket database and an executable program for accessing and updating the database and each of the computers having access to a graphical user interface (GUI), the GUI including at least one screen operable to add a new trouble ticket to the database, each trouble ticket including at least (i) a description of the an issue, (ii) a person responsible for resolving the issue and (iii) a severity level of the issue;

an email system in communication with the executable program, the executable program automatically emailing a trouble ticket number to the person responsible for resolving the issue;

a paging system, the paging system automatically paging the person responsible for resolving the issue when the severity level of the trouble ticket is above a predetermined threshold;

means for communicating with and sharing trouble ticket data with an organization that operates under outside contract, the organization assigning its own tracking number to a given trouble ticket, the tracking number being stored in the database,

wherein the organization updates the database, and

wherein the database stores information relating to whether a resolution of a trouble ticket, proposed by outsourced personnel who work for the organization, has been ~~verified~~ approved by internal personnel for whom the outsourced personnel are working.

13. (Original) The system of claim 12, wherein the paging system transmits the trouble ticket number.

14. (Original) The system of claim 12, wherein the screen operable to add a new trouble ticket includes fields for indicating the status of the trouble ticket and closed date of the trouble ticket.

15. (Original) The system of claim 12, wherein the trouble ticket is associated with a geographical area.

16. (Original) The system of claim 12, wherein the trouble ticket is one of a problem, an inquiry, a bill notification and user acceptance testing data.

17. (Original) The system of claim 12, further comprising a duplicate trouble ticket module.

18. (Original) The system of claim 12, further comprising a report creation module.

 19. (Original) The system of claim 12, wherein the database is accessible via the Internet.

( 20. Canceled. )

21. (Currently Amended) A trouble tracking system for monitoring trouble tickets, comprising:

a central computer including an executable program and a database wherein the database stores a plurality of trouble tickets, each trouble ticket including a trouble ticket number, an issue description and a duplicate ticket flag;

a plurality of user computers connected to the central computer via a network, the user computers displaying a graphical user interface (GUI) that permits entry and updating of trouble tickets in the database;

means for communicating with and sharing trouble ticket data with an organization that operates under outside contract, the organization assigning its own tracking number to a given trouble ticket, the tracking number being stored in the database,

wherein the organization updates the database, and

wherein the database stores information relating to whether a resolution of a trouble ticket, proposed by outsourced personnel who work for the organization, has been ~~verified~~ approved by internal personnel for whom the outsourced personnel are working, and

a duplicate ticket module operable to search the database for actual or potential duplicate trouble tickets, the duplicate ticket module making available a list of actual or potential duplicate trouble tickets,

wherein one or more duplicate trouble tickets are flagged with a trouble ticket number of a representative trouble ticket.

22. (Original) The trouble tracking system of claim 21, further comprising a paging system.

23. (Original) The trouble tracking system of claim 22, wherein each trouble ticket further includes an indication of severity and a person responsible field and when the indication of severity exceeds a predetermined threshold, the person identified in the person responsible field is paged.

24. (Original) The trouble tracking system of claim 23, further comprising an email server, wherein the person identified in the person responsible field is sent an email alerting him that he has been assigned a trouble ticket.

25. (Original) The trouble tracking system of claim 21, further comprising GUI screens for adding a problem, an inquiry, a bill notification and a user acceptance data issue to the database.

 26. Canceled.  
27. Canceled.

28. (Original) The trouble tracking system of claim 21, wherein the database stores information associating a trouble ticket to a geographical region.

29. (Currently Amended) A method for tracking trouble tickets, comprising the steps of:  
providing a trouble ticket database;  
accessing, via a network, a graphical user interface (GUI), the graphical user interface including at least one screen, the screen being operable to enter a new trouble ticket along with  
(i) a person responsible for resolving the trouble ticket and (ii) a severity level for the trouble ticket, and to store the trouble ticket in the database;

paging the person responsible when the severity level associated with the trouble ticket is above a predetermined threshold;

communicating with and sharing trouble ticket data with an organization that operates under outside contract, the organization assigning its own tracking number to a given trouble ticket, the tracking number being stored in the trouble ticket database, and

storing in the trouble ticket database information relating to whether a resolution of a trouble ticket, proposed by outsourced personnel who work for the organization, has been verified approved by internal personnel for whom the outsourced personnel are working.

30. (Original) The method of claim 29, further comprising emailing the person responsible with at least a trouble ticket number.

31. (Original) The method of claim 29, further comprising creating a report based on a plurality of trouble tickets stored in the database.

32. (Original) The method of claim 29, further comprising searching the database for duplicate trouble tickets.

33. (Original) The method of claim 29, wherein the trouble tickets comprise at least one of a problem, an inquiry, a bill notification and a user acceptance data issue.

34. Canceled.

35. Canceled.

36. (Original) The method of claim 29, further comprising storing status information.

37. (Original) The method of claim 29, further comprising storing information associating a trouble ticket to a geographical region.

38. (Currently Amended) A method for managing issue resolution, comprising the steps of:

connecting a plurality of computers in a network, one of the computers including a trouble ticket database and an executable program for accessing and updating the database and each of the computers having access to a graphical user interface (GUI), the GUI including at least one screen operable to add new trouble tickets to the database, each trouble ticket including at least (i) a description of an issue, (ii) a person responsible for resolving the issue and (iii) a severity level of the issue;

emailing a trouble ticket number to the person responsible for resolving the issue;

automatically paging the person responsible for resolving the issue when the severity level of the trouble ticket is above a predetermined threshold;

communicating with and sharing trouble ticket data with an organization that operates under outside contract, the organization assigning its own tracking number to a given trouble ticket, the tracking number being stored in the database,

wherein the organization updates the database, and

storing in the database information relating to whether a resolution of a trouble ticket, proposed by outsourced personnel who work for the organization, has been ~~verified~~ approved by internal personnel for whom the outsourced personnel are working.

39. (Original) The method of claim 38, further comprising transmitting the trouble ticket number in the paging step.

40. (Original) The method of claim 38, further comprising storing a status of the trouble ticket and a closed date of the trouble ticket.

41. (Original) The method of claim 38, further comprising associating the trouble ticket with a geographical area.

42. (Original) The method of claim 38, wherein the trouble ticket is one of a problem, inquiry, a bill notification and user acceptance testing data.

43. (Original) The method of claim 38, further comprising searching for duplicate trouble tickets.

44. (Original) The method of claim 38, further comprising creating a report based on a plurality of trouble tickets.

45. (Original) The method of claim 38, further comprising accessing the database via the Internet.

46. (Currently Amended) A method for monitoring trouble tickets, comprising the steps of:

storing in a database, resident on a central computer, a plurality of trouble tickets, each trouble ticket including a trouble ticket number, an issue description and a duplicate ticket flag;

providing a plurality of user computers connected to the central computer via a network, the user computers displaying a graphical user interface (GUI) that permits entry and updating of trouble tickets in the database;

communicating with and sharing trouble ticket data with an organization that operates under outside contract, the organization assigning its own tracking number to a given trouble ticket, the tracking number being stored in the database, wherein the organization updates the database; and

storing in the database information relating to whether a resolution of a trouble ticket, proposed by outsourced personnel who work for the another organization, has been ~~verified~~ approved by internal personnel for whom the outsourced personnel are working,

searching the database for actual or potential duplicate trouble tickets;

displaying a list of actual or potential duplicate trouble tickets; and

flagging one or more duplicate trouble tickets including indicating a trouble ticket number of a representative trouble ticket.

47. (Original) The method of claim 46, further comprising paging a person responsible for resolving a trouble ticket.

48. (Original) The method of claim 46, wherein each trouble ticket further includes an indication of severity and a person responsible field, and when the indication of severity exceeds a predetermined threshold, paging the person identified in the person responsible field.

49. (Original) The method of claim 46, further comprising emailing a person responsible for resolving the trouble ticket.

50. (Original) The method of claim 46, further comprising displaying GUI screens for adding a problem, an inquiry, a bill notification and a user acceptance data issue to the database.
